Apple Watch Tips

Make the on-screen text larger

With such a tiny device, sometimes you want the option for bigger text at your disposal. Apple makes this easy in its accessibility settings; to change the text on your Watch, go to **Settings > Brightness & Text Size**, and adjust to your liking.

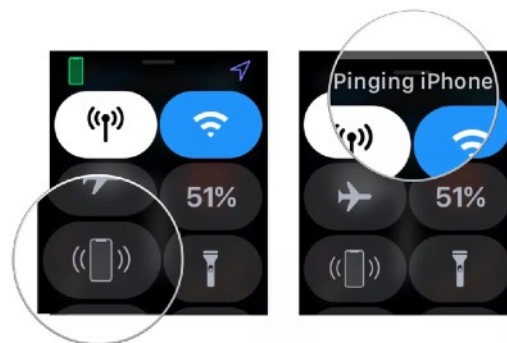

You can also choose a specialty Big Text watch face if all you're interested in is seeing the time in large numerals.

Mute alerts with your palm

If you have sound enabled on the Watch, you can keep it from annoying the outside world with notification sounds: If it goes off in a place you'd rather it not, you can cover the display with your hand for three seconds or more to instantly mute any new sounds. To turn this on, you'll need to visit the Apple Watch app on your iPhone, then go to **My Watch > Sounds & Haptics > Cover to Mute**.

Find your iPhone with your Watch

Can't find your iPhone? Don't sweat it — the Apple Watch can help you track it down. From your Watch face, swipe up to activate Control Center. From here, tap the Ping iPhone button in blue to have it make a noise.

Take a screenshot

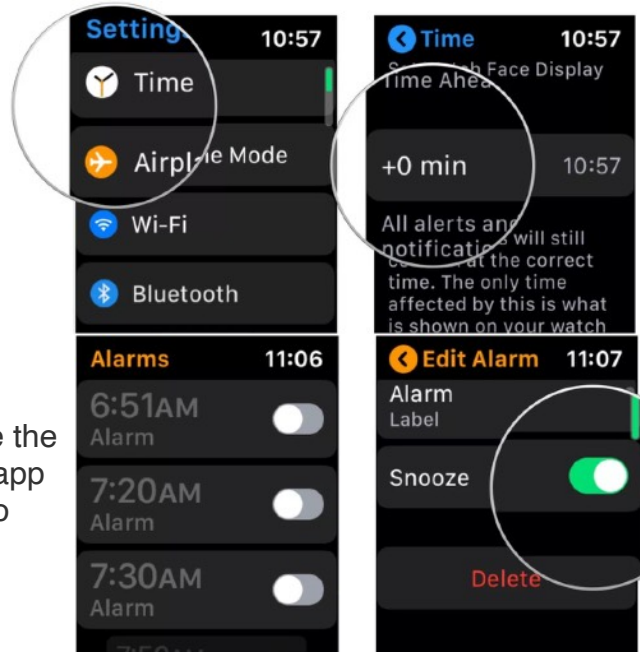

Want to memorialize that Digital Touch drawing or Activity achievement? You can take a screenshot on your Apple Watch by quickly and simultaneously pressing both the side button and Digital Crown.

Force Apple Watch to restart

If your Watch is misbehaving, you can turn it off by pressing and holding the side button until you see the Power Off slider, then drag it across the screen. If your Watch is entirely frozen, you can perform a force reboot by holding both the side button and Digital Crown for at least ten seconds until you see the Apple logo.

Set your watch five minutes fast

Like being early for your appointments? You can manually set the watch face to display five minutes fast — it won't affect your alarms, notifications, or clocks from other countries, but it'll show on the Watch face. To do this, go to **Settings > Time > +0 min**, then turn the Digital crown to advance the time ahead up to 59 minutes.

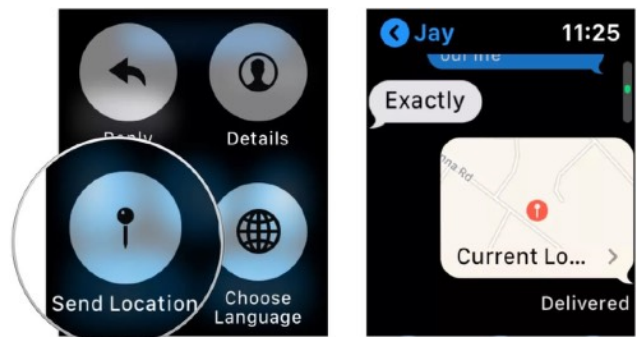

Turn off snooze for your alarms

Don't trust yourself to wake up on time? You can disable the Snooze button on Apple Watch by going into the Alarm app on the device and tapping on the alarm time you'd like to change. Toggle so snooze isn't an option.

Share your location in Messages with Force Touch

Want to send your friend your current location while you're out and about? From your Messages conversation, Force Touch the display and tap **Send Location**.

Hold a call until you can find your iPhone

While taking phone calls on the Apple Watch is pretty futuristic-feeling, it's not always practical. If you get a call on your Watch that you want to pick up, but your phone's not in easy reach, and you don't want to start it on your Watch, you can tap **Answer on iPhone** to place the call on hold until you can find your device. On the other end, the person will hear a repeated sound until you can get to your iPhone

Clear all your notifications with Force Touch

Though you can swipe left to delete an individual notification from the Notifications screen, you can also get rid of all your notification alerts in one tap. First, swipe down from the display to access Notifications, then Force Touch the display to bring up the **Clear All** option.

Set a default city for your weather

The Weather app on your Watch can check a variety of cities, including your current location. To change the default location, visit the Apple Watch app on your iPhone, then go to **My Watch > Weather > Default City**.
