How to clean most of your Apple products

Cleaning an Apple product is actually very quick and easy to do. All it takes is a few household items which you probably already have around.

Apple products are made with a variety of materials, and each material might have specific cleaning requirements. To get started, here are some tips that apply to all products:

- Use only a soft, lint-free cloth. Avoid abrasive cloths, towels, paper towels, or similar items.
- Avoid excessive wiping, which might cause damage.
- Unplug all external power sources, devices, and cables.
- Keep liquids away from the product, unless otherwise noted for specific products.
- Don't get moisture into any openings.
- Don't use aerosol sprays, bleaches, or abrasives.
- Don't spray cleaners directly onto the item.

Is it OK to use a disinfectant on my Apple product?

A soft microfiber cloth lightly dampened with warm water is all you should need. *Don't use products containing bleach or hydrogen peroxide. Avoid getting moisture in any opening, and don't submerge your Apple product in any cleaning agents. Don't use on fabric or leather surfaces.*

If liquid makes its way inside your Apple product, get help from an Apple Authorized Service Provider or Apple Store as soon as possible. Liquid damage isn't covered under the Apple product warranty or AppleCare Protection Plans, but you may have rights under consumer law. If you plan to visit an Apple Store, make a reservation at the Genius Bar.

iPhones

Apple has some different recommendations depending on the model iPhone so to get all the correct info for your phone -

macOS: How to Use Scheduled Send in Apple Mail

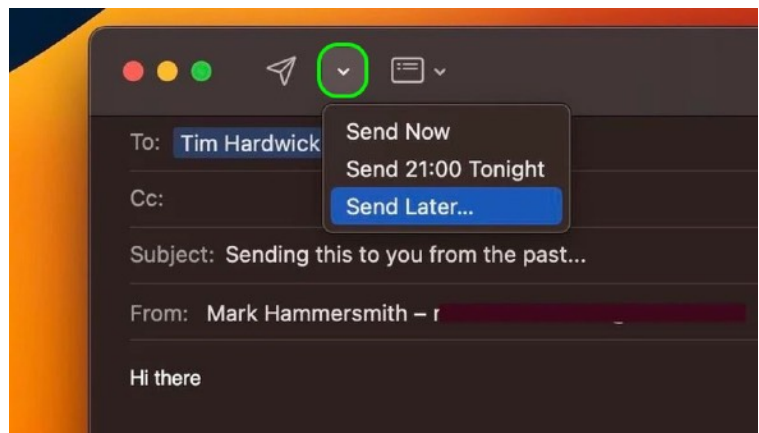

In previous versions of macOS, Apple Mail has lacked certain features that have become almost basic functions of rival mail client apps, but with the release of Ventura, Apple has finally added a long-awaited function - Scheduled Send.

In macOS Ventura, Apple added some notable new functionality to its stock Mail app. Scheduled Send does just what you'd expect – it allows you to compose messages in Mail and schedule them to be sent at a set time and date in the future. The feature's availability means you can type up emails in advance when you have spare time, even if you don't intend to send them immediately.

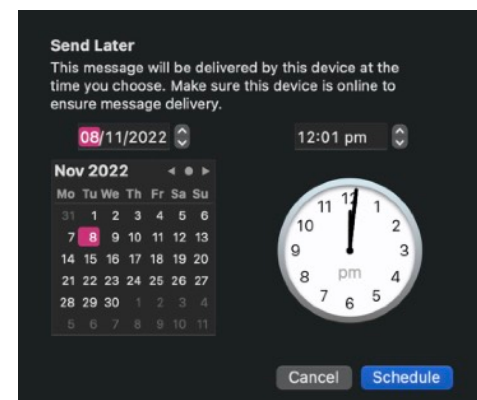

Scheduling an email to be sent at a later time is easy. The following steps show you how it's done.

- In the Mail app interface, click the Compose new message button and enter your intended recipients, add a subject title, then compose your email.
- When you're done, click the down button next to the Send icon.
- From the dropdown, select from Send Now, Send Tonight/Tomorrow, and Send Later....

Clicking the last option will bring up a clock and calendar for you to set a specific time and date. Once you've done that, click **Schedule**.

That's all there is to it – your email will leave your sent box at the scheduled time.
